

Pollution, Waste, and Resource Management Policy and Practices

Ornsirin Holding Public Company Limited and its group of companies (“the Company”) recognize that business operations may have environmental impacts in the form of pollution, waste generation, and natural resource consumption. The Company is therefore committed to systematically managing these issues across its entire value chain, from office operations and construction sites to completed projects. The Company emphasizes prevention at the source, alongside impact reduction and continuous improvement in resource efficiency, in strict compliance with applicable laws and regulations, to support sustainable growth for the Company and all stakeholders.

To achieve these objectives, the Company has established the following key practices:

- Control and reduce pollution arising from various activities through the selection of materials, technologies, and methods that minimize environmental impact, with regular monitoring, measurement, and evaluation to ensure compliance with relevant standards and requirements. This includes key pollutants such as dust, wastewater, and hazardous waste, along with continuous process improvement to reduce emissions in the long term.
- Manage waste in accordance with the 3 Rs principle (Reduce, Reuse, Recycle) by minimizing waste generation at the source, promoting reuse and recycling, and ensuring proper segregation, storage, and disposal in compliance with legal requirements, including ongoing monitoring and analysis to improve waste reduction practices.
- Promote the application of circular economy principles by supporting the reuse of materials and designing processes to reduce resource loss in the long term.
- Use resources efficiently by systematically monitoring and controlling the consumption of energy, water, and other resources, while promoting the use of alternative resources, environmentally friendly technologies, and materials.
- Promote energy efficiency by implementing continuous measures to reduce energy consumption across activities, while supporting the use of alternative energy and energy-efficient technologies to reduce greenhouse gas emissions and long-term environmental impacts.
- Establish and implement continuous environmental impact prevention and mitigation measures by integrating sustainable design, construction, and project management practices.
- Enhance knowledge and awareness of environmental management among employees, business partners, and contractors to ensure effective implementation of the Company’s practices.
- Promote collaboration with business partners to reduce pollution, manage waste in accordance with the 3Rs principle, and improve resource efficiency throughout the value chain.
- Regularly review, improve, and develop environmental management practices, while transparently disclosing relevant information to stakeholders.

Effective from 1 December 2025 onwards.
